

model EU-SP158B

Freeze Protection Bleed Valve

FEATURES & BENEFITS

FREEZE PROTECTION

Protects an emergency shower and/or eyewash from water temperatures that can drop below 35° F (1.7° C) by bleeding off the excessively cold fluid during 'snap freezes'.

OPTIONS

For more information, visit www.hawsc.com or call (888) 640-4297.

SPECIFICATIONS

Model SP158B, fully engineered freeze protection valve is constructed of a one piece brass body, and supplied with a removable cartridge for easy cleaning and maintenance. Automatic thermal actuator bleed valve opens when internal water temperature falls below 35° F (1.7° C) and closes completely when the water climbs back to 42° F (5.6° C). 1/2" NPTF inlet and outlet.

APPLICATIONS

Specifically, SP158B is suitable for emergency applications, or other plumbing situations where freezing water temperature protection is needed or required. Can be used in conjunction with most Haws shower and/or eyewash units.
