

GUARANTEED TEPID WATER WHEN IT'S NEEDED

Instantaneous Water Heaters Ensure 15-minute Emergency Shower and Eyewash Flush

Ensuring that emergency showers and eyewash stations are used correctly is a critical aspect of workplace employee safety. Haws®' new Instantaneous Heaters provide tepid water for emergency showers and eyewash stations to ensure employees can use them safely and effectively for the full 15-minute requirement.

Advantages For Your Site:

- **Endless Tepid Water:** Victims will stay the required 15-minutes in the water flow, with no risk to become hypothermic.
- **Energy Saving:** The instantaneous water heater only consumes power when actively heating water to reduce unnecessary energy use.
- **Save Money:** Water is heated on-demand to reduce continuous heating thereby reducing maintenance costs over alternative stand-by systems.
- **Minimize Legionella Risk:** No standing tepid water in the system reduces the legionella risk and increases hygiene.
- **Space Saving:** Compared to other solutions, the footprint is minimal with no boilers, pumps, or tepid water loop needed. The instantaneous heater is wall-mounted above or nearby the emergency equipment to free-up floor space.
- **Save Time:** The instantaneous water heater requires only a power cable to easily integrate into existing setups. There are no valves, pumps or other additional features needed.
- **Reliable Operation:** Unit maintains consistent water temperature during use without the need for valves, pumps, or additional features.
- **Compliant to International Standards:** The instantaneous water heater meets the CE standard and is suitable for use with eye wash stations and emergency showers according to EN 15154 and ANSI.Z358.

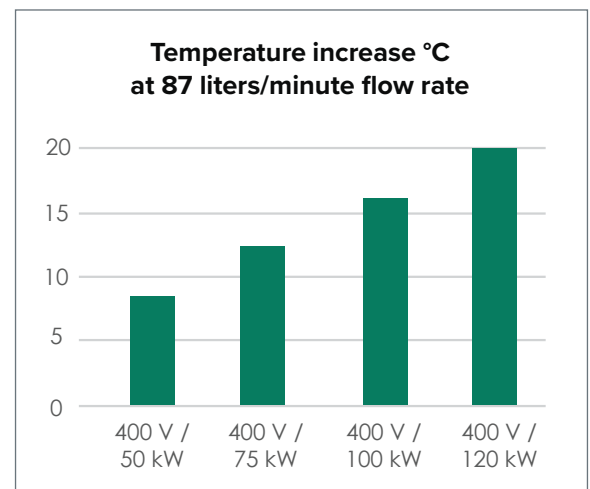

For retrofitting existing installations as well as for new systems, the Haws Instantaneous Heaters 9321 CE, 9326CE and 9327CE are the smart choice for workplace safety.
